

By keeping an open mind, I explored diverse user needs like wellness, networking, and productivity. This approach led to the integration of coworking tools with wellness services, ensuring a holistic digital nomad experience.

**Problem**  
Static coworking  
space lists

**Solution**  
Live updates on Wi-Fi  
speeds and crowd  
density

To solve the problem of unreliable coworking space information, I designed a live tracker showing real-time data on Wi-Fi speeds, crowd levels, and user reviews. This feature helps nomads make better workspace decisions.

Focusing on the user's convenience, I designed a personalized event calendar that recommends relevant networking events based on location and interests. This simplifies the process of connecting with like-minded individuals.

Together, these mindsets enabled the creation of a practical, user-friendly app prototype. It addresses the real challenges of digital nomads by combining innovative solutions with intuitive design.
